Summary

Innovative Full-Stack AI Engineer with hands-on experience architecting, developing, and deploying scalable, AI-powered systems and enterprise applications. Expert in leveraging Large Language Models (LLMs) via Google Vertex AI to build intelligent automation pipelines, while engineering robust backends (Python, Spring Boot) and highly responsive user interfaces (React.js, JavaScript). Adept at managing the entire lifecycle of AI applications—from prompt engineering and CV/OCR parsing pipelines to cloud deployments (GCP, Cloud Run) and enterprise system integrations.

Experience

Intellismith Services Private Limited Feb 2026 - Present

Full Stack AI Engineer | **Tech-Stack:** Python, Flask, Vertex AI, Watsonx Orchestrate, JavaScript *Noida*

- **AI Product Architecture:** Led the end-to-end design and development of SmartHireX, an AI-powered recruitment intelligence platform integrating generative AI with automated enterprise workflows.
- **LLM Core Implementation:** Built AI-driven candidate assessment models using Google Vertex AI (Gemini) to execute deep semantic analysis, scoring, strengths/gaps profiling, and explainable hiring recommendations.
- **AI & Workflow Automation:** Utilized **IBM Watsonx Orchestrate** to design and deploy intelligent digital workers, automating complex multi-step recruitment tasks, sequencing NLP operations, and optimizing agentic workflows.
- **Intelligent Document Parsing:** Developed robust CV parsing pipelines handling multi-format documents (PDF, DOCX) and engineered intelligent OCR fallback mechanisms to ensure high-accuracy data extraction on scanned resumes.
- **System Interoperability:** Designed and implemented secure REST API integrations with CEIPAL ATS to automatically sync large-scale job requisitions, candidate submissions, and resumes.
- **Full-Stack Cloud Architecture:** Managed cloud deployment, configuration, secret management, and production releases on GCP and Cloud Run, securing workflows with Google OAuth and domain-based access controls.
- **UI/UX Delivery:** Designed and enhanced recruiter-facing user interfaces, including interactive screening dashboards, candidate scorecards, progress tracking, and automated communication workflows via WhatsApp.

CDAC (Centre For Development Of Advanced Computing) Jan 2025 - Sept 2025

Software Developer Intern | **Tech-Stack:** Java, React.js, Ant Design, Spring Boot, SQL, Python (ML) *Noida*

- Developed enterprise hospital applications in the HIDD department for employee records, allowances, and administrative workflows.
- Built **Spring Boot** backend services to manage employee profiles, salary structures, offices, and allowance calculations.
- Implemented secure **REST APIs** using **Spring Boot & JPA** for high-volume CRUD operations and to maintain DB Transactions.
- Designed relational schemas and optimized **SQL** queries using indexing and joins to improve data accuracy and reporting performance.
- Developed responsive and reusable **React.js** components using Ant Design to build scalable dashboards and admin interfaces.
- Followed Agile practices and **CI/CD pipelines** for automated builds, testing, and deployments.

Education

Thapar Institute Of Engineering and Technology **08/2021-06/2025**
Electronics and Communication Engineering CGPA: 8.33/10

City International School **04/2019-03/2020**
Class 12th Percentage: 94.6%

Technical Skills

AI & Machine Learning: LLM Integration (Google Vertex AI/Gemini), IBM watsonx Orchestrate, OCR, Python (ML/Pandas)
Languages: Python, Java, JavaScript, C++, SQL, HTML5, CSS3
Backend Technologies: Flask, Spring Boot, Microservices, REST APIs, Node.js, JPA, Hibernate
Frontend Technologies: React.js, Ant Design, JavaScript (ES6+), Bootstrap, Tailwind CSS
Cloud & Databases: Google Cloud Platform (GCP), Cloud Run, Google OAuth, PostgreSQL, MySQL
Core Competencies: CI/CD Pipelines, Data Structures & Algorithms, System Architecture, Performance Optimization

Certifications

Spring Boot: I completed an advanced course in Java Full-Stack Development where I get hands on experience on Spring Boot Microservices, Hibernate, JPA, and RESTful APIs. **Link**

Frontend Development: Completed a 61.5-hour Web Development Bootcamp covering all the core concepts of Frontend Web Technologies. **Link**

JavaScript Programming: Developing Interactive Websites with JavaScript course by Internshala focusing on Core JavaScript, Functions & Arrays, OOPS, DOM, Asynchronous JS, Browser modules. **Link**

Projects

AQI-Estimator| ***Flask, Plotly, Pandas, JavaScript*** **Link**

- Developed a Flask-based AI application to estimate air pollutant concentrations by processing real-time sensor data and applying regression-based predictive models.

- Performed extensive data cleaning, normalization, and feature extraction using **Pandas** to improve dataset quality and model accuracy.
- Designed interactive **Plotly** dashboards with line and scatter visualizations to analyze CO, H, and Dust pollutant trends across multiple samples.
- Implemented automated regression detection and signal smoothing to enhance prediction stability and analytical reliability.

Gallarie| ***HTML, CSS, Bootstrap, JavaScript, Unsplash API*** **Link**

- Engineered a scalable image search web application by integrating the **Unsplash API** to fetch high-resolution images in real time.
- Implemented advanced frontend features including keyword-based search, pagination, caching, and lazy loading to optimize API consumption and reduce page load time.
- Designed responsive layouts using **HTML, CSS, Bootstrap**, ensuring consistent rendering and usability across mobile, tablet, and desktop devices.
- Displayed real-time image metadata such as likes, views, author details, and captions to enhance user engagement and browsing experience.

Climate Pulse| ***HTML, CSS, JavaScript, OpenWeather API*** **Link**

- Built a real-time weather forecasting web application by securely integrating the **OpenWeather API** to retrieve live climate data.
- Implemented browser-based geolocation services to automatically detect user location and fetch accurate 5-day weather forecasts.
- Processed and displayed temperature, humidity, wind speed, pressure, and weather conditions using dynamic JavaScript rendering.
- Developed a fully responsive and interactive user interface using **HTML, CSS, and JavaScript**, ensuring fast load times and cross-browser compatibility.
